

COLORADO'S POWER PATHWAY

| You're invited to our virtual town hall!

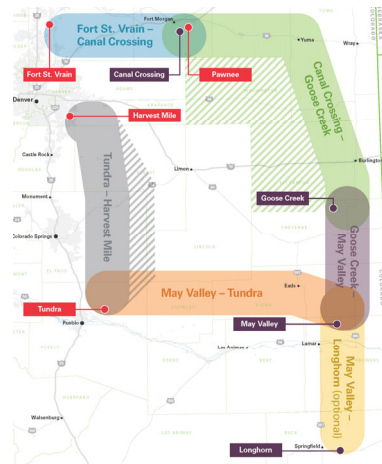

Please join us at one of our virtual town halls on Thursday, Sept. 23, at noon or 6 p.m. Each town hall will include the same presentation followed by a question-and-answer session. The presentation will provide a brief project overview and cover siting and routing updates, including the development of focus areas for identification of transmission line routes and substation sites. We will also provide information on in-person public open houses planned to take place this October and November. [Join the live stream](#) or dial 855-962-1519 (English) or 833-380-0723 (Español) for audio only.

| Expanded Segment 5 Study Area

The Segment 5 study area has been expanded to the east in El Paso, Lincoln and Elbert counties. The additional area is being evaluated for possible transmission line routes between Tundra and Harvest Mile substations that avoid recently discovered constrained areas along the west side of the study area. The expanded study area is represented by the grey hatched lines on the [Colorado's Power Pathway map](#) and is shown in greater detail on the [Segment 5 Overview map](#).

Frequently Asked Questions

Visit our new [Frequently Asked Questions](#) page to browse categories individually or use the Search feature to locate a topic of interest. Additional content will be added to the page as work on Colorado's Power Pathway progresses.

About the Project

Colorado's Power Pathway is a proposed \$1.7 to \$2 billion investment to improve the state's electric grid with approximately 560 to 650 miles of new 345-kilovolt electric transmission line and several new and expanded substations. If approved, segments of Colorado's Power Pathway could be operating as early as 2025. It will increase electric reliability, connect new energy resources in eastern Colorado, boost the regional economy and create jobs during construction.
