

COLORADO'S POWER PATHWAY

Public Open Houses

Thank you to everyone who attended our recent public open houses. We appreciate your feedback as we continue to work through our ongoing routing process. If you were unable to attend:

- Review our [interactive map](#) for the latest routing information and provide feedback. Meeting materials and fact sheets are also available for review in our [library](#).
- Complete our [comment form](#) no later than **Thursday, March 17**. The general inquiry form and Project email and hotline will remain active beyond the March 17 deadline for those who wish to make comments or ask questions.

Additional public open houses are anticipated to be held this spring to gather feedback on revised transmission line route and substation site options in segments where the preferred transmission line route has not been identified. A detailed meeting schedule will be available on our website in the coming weeks.

Public Feedback Survey

We value your opinion. Please take a few minutes to complete our [online survey](#) and provide feedback about how you access information about Colorado's Power Pathway. The survey will take approximately five minutes to complete, and responses are requested by Thursday, March 17.

Next Steps

As we look ahead at next steps for Colorado's Power Pathway:

- We will continue incorporating link-specific feedback throughout the routing process.
- Engineering design work will start in segments where the preferred transmission line route has been identified.
- The county land use permitting process will start for Segments 2 and 3. Additional public input opportunities will take place during public hearings for the land use permit in each jurisdiction.
- Project representatives will reach out to individual landowners to discuss the preferred transmission line route and easements.

About the Project

Colorado's Power Pathway is a proposed \$1.7 to \$2 billion investment to improve the electric grid and enable future renewable energy development around the state. Colorado's Power Pathway includes approximately 560 to 650 miles of new 345-kilovolt electric transmission line and several new and expanded substations. If approved, segments of Colorado's Power Pathway could begin construction in 2023 and begin operating as early as 2025. The new infrastructure will increase electric reliability, connect new energy resources in eastern Colorado, boost the regional economy and create jobs during construction.
